Allowable Subject Matter

Claims 1-2, 4-36, 38 are allowed.

The primary reason for allowance is that the prior art fails to teach or suggest:

“A smoking article comprising a rod of smoking material that can be pyrolyzed and inhaled... said rod having a first end which is devoid of a filter element and suitable only to be lit in use and an opposite second end which may or may not be adjacent to a filter element and suitable for placement in a smoker's mouth in use, said rod comprising at least two discrete smokable segments joined in substantially end-to-end abutment, the segment adjacent said second end comprising an encapsulated flavourant incorporated within the smoking material thereof, and the segment adjacent said first end being devoid of any encapsulated flavourant in the smoking material thereof”

While US Patent 4,924,883 (Perfetti) teaches a smoking article comprising a rod of smoking material that can be pyrolyzed and inhaled, and which is wrapped in a wrapper (24, Figure 3; col. 5 lines 33-48), said rod having a first end (8, Figure 3; col. 5 lines 33-48) which is devoid of a filter element and suitable only to be lit in use and an opposite second end which may or may not be adjacent to a filter element (see 20, Figure 3; col. 7 lines 21-34) and suitable for placement in a smoker's mouth in use, said rod comprising at least two discrete smokable segments (8, 12, Figure 3; col. 5 lines 33-48), the segment adjacent said second end comprising an encapsulated flavourant incorporated within the smoking material thereof (col. 6 lines 1-11), and the segment

Art Unit: 1745

adjacent said first end being devoid of any encapsulated flavourant in the smoking material thereof, Perfetti does not expressly teach the claimed feature of the two discrete smokable segments being joined in substantially end-to-end abutment.

Instead, Perfetti teaches a passageway 16 (Figure 3) between said segments and it would not have been obvious to one ordinarily skilled in the art at the time the invention was made to join said segments in substantially end-to-end abutment, as the purpose of said passageway 16 is to allow the tobacco smoke coming from segment 8 to cool substantially before it reaches segment 12, such that the flavorant of 12 elutes (Perfetti: col. 6 lines 24-44).

While US Patent 4,759,380 (Norman) teaches a smoking article comprising a rod (15, Figure 1; col. 2 lines 39-42) of smoking material that can be pyrolyzed and inhaled and which is wrapped in a wrapper (30, Figure 1; col. 2 lines 50-54), said rod having a first end (20, Figure 1; col. 2 lines 39-57) which is devoid of a filter element and suitable only to be lit in use (col. 2 lines 39-57; col. 3 lines 45-62) and an opposite second end (25, Figure 1; col. 2 lines 39-57) which may or may not be adjacent to a filter element (35, Figure 1; col. 2 lines 58-61) and suitable for placement in a smoker's mouth in use, said rod comprising at least two discrete suitable segments (20 and 25, Figure 1; col. 2 lines 39-57) joined in substantially end-to-end abutment, the segment adjacent said first end comprising a flavourant incorporated within the smoking material thereof (col. 3 lines 45-62), and the segment adjacent said second end being devoid of any encapsulated flavourant (col. 3 lines 63-68; col. 4 lines 1-5), Norman does not expressly teach the

Art Unit: 1745

claimed feature of the segment adjacent said second end comprising an encapsulated flavourant incorporated within the smoking material thereof, and the segment adjacent said first end being devoid of any encapsulated flavourant.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
